

Hi my self Sanskar Debnath, I am currently studying in Techno College of Engineering Agartala.

I created this "PDF READER & CONVERT THE TEXT IN SPEECH" by using GTTS library in python.

Here are the instructions that I have made for the users:

we need to manually save the pdf path in the pdf_file_path variable.

Then we need to run the .py app and input a file name by which we can save it after that after saving the music file will appear in the same folder, fine.

Now lets talk about the supporting languages, by default in my app it will support Hindi, English, any downloader can change it.

If the Pdf size is greater then 400kb then we need to wait for a few second until the final execution of the app is completed.

Thank You: Sanskar Debnath
